

MISSION CONTROL UI

Restease

A highly resilient, specialized mobile interface for disaster response tracking and SOS incident dispatch.

— 01 / OVERVIEW

High-Stress Operations Demand Absolute Clarity.

During extreme environmental crises, rescue units suffer from cognitive overload, delayed telemetry, and fragmented communication.

The Solution: Restease provides a focused, dark-themed command center on mobile devices. It aggregates real-time environmental hazards, GPS telemetry, and SOS vectors into a single, unbreakable UI layout that prioritizes function over form.

Typography & Purpose

Inter

Primary Sans-Serif

Used for high legibility across dense information blocks, primary navigation, and action buttons. The balanced x-height ensures readability even in harsh outdoor lighting.

Aa Bb Cc Dd Ee Ff

JetBrains Mono

Technical Monospace

Strictly reserved for telemetry data, GPS coordinates, live ETAs, and technical statuses. Monospace styling prevents character shifting and ensures distinct numeral recognition during critical reads.

01 23 45 67 89

Color Palette

A purpose-built dark theme designed to reduce eye strain in low-light conditions while providing maximum contrast for critical alerts.

#0F1115

Void Black (App Background)

#1E293B

Slate (Cards & Panels)

#FF4F00

Alert Orange (SOS & Warnings)

#10B981

Safe Green (Active / Nominal)

MAP & TELEMETRY

Control Dashboard

The core view. The map provides real-time geospatial tracking of all units, combining unit telemetry with critical geofencing.

- **Environmental Banner:** Live rain rates and computed landslide risk thresholds pinned to the top.
- **Visual Geofencing:** Safe zones and danger zones are explicitly rendered.
- **Layer Toggles:** Quick toggles to declutter the UI (Paths & Zones) without deep menus.

— 05 / SCREEN BREAKDOWN 2

TRIAGE LOG

Active SOS Triage

When emergencies happen, the SOS log acts as an un-ignorable queue for dispatchers.

- **Time-Elapsed Tracking:** Every SOS card calculates exact time elapsed since trigger.
- **Status Highlighting:** Unacknowledged alerts pulse with high-contrast borders.
- **Direct Actions:** Immediate access to the incident details from the high-level list view.

Incident Response

A highly focused, drill-down screen providing exact context for a specific distressed unit.

- **Precision Coordinates:** Displaying exact lat/long for pinpoint rescue operations.
- **Live Dispatch Tracking:** Real-time calculations of the dispatched unit's distance (km) and estimated ETA (mins).
- **Unit Context:** Immediate access to the distressed unit's battery life, signal strength, and team roster.

RESILIENCE

System Settings

System-level controls and resilience configurations for edge environments.

- **Theme Engine:** Deep toggles for Light/Dark modes, allowing on-the-fly contrast adjustments based on ambient lighting.
- **Sync Status:** Visibility into the offline/online synchronization state, a critical factor for remote missions.
- **Data Logs:** Direct export paths for post-mission analysis and debriefing.

08 / CONCLUSION

Design That Saves Lives.

Restease proves that functional UI is beautiful UI. By stripping away non-essential elements, employing a strict typographic hierarchy, and integrating intelligent dispatch mechanics natively into the map, we reduce the time from SOS trigger to rescue.
